[TULIKIVI] Made of soapstone, which stores radiant heat and emits it evenly over a long period of time, Tulikivi's wood-burning fireplaces offer an efficient alternative to traditional fireboxes. Cleaner combustion technology helps reduce emissions, and a wide range of customizable streamlined designs ensure the perfect fit for any room. tulikivi.com

[RAIS] Available in a range of shapes and sizes, each with elegant Scandinavian design, RAIS free-standing woodstoves heat by radiation and convection for an even distribution of heat. With a CO₂ emission equal to that of wood left to decompose naturally, the stoves—when used correctly—are CO₂ neutral. rais.com

[ECOSMART] Fueled by renewable green energy (denatured alcohol), EcoSmart™'s flue-less, vent-free, open fireplaces require no gas or utility connection. The versatile burner kit is ideal for custom designs (pictured); free-standing models, fireboxes, fireplace inserts, fire tables and a unique tower are also available. ecoflameco.com

[GALLEGOS] For a one-of-a-kind design, The Gallegos Corporation can work with virtually any natural material, from antique firebricks and soapstone to granite, travertine and field stone, to create any fireplace you can dream up, from gas to wood-burning, and indoor to outdoor applications. gallegoscorp.com
